D.tec International Ltd.
PO Box 914
Preston, PR4 9BE.

PAM Group was formed in 2004 and is the largest privately owned Occupational Health, Rehabilitation, Wellbeing and Absence Management company in the UK. PAM provides an all-encompassing occupational health provision to a large joint venture of approximately 4,500 employees working on one of Britain's largest infrastructure projects.

Mike Fawcett: PAM Group - Operations Director

1. Challenge

PAM Group found their previous drug screening process time consuming, especially within their induction procedures and onboarding process. The saliva screening device they utilised, took a long time to obtain a sample and there was feedback that the process was unpleasant at times for employees.

3. Benefit

The portability of the DrugWipe Dual has been a great benefit to PAM Group, as they are able to easily distribute the device across multiple sites and locations within the project.

Also, due to the efficient nature of the screening device, they have found an overall cost saving.

2. Solution

PAM Group utilise the DrugWipe Dual onsite screener for their random and with cause screening, as well as induction testing for any potential new workers.

D.tec have also provided 'Authorised Screener' training sessions on the use of the device, for the drug and alcohol testing team, as well as subsequent refresher training sessions.

4. Result

By utilising the DrugWipe Dual as their chosen screening device, PAM Group have found their testing process to be quicker, less intrusive and a more efficient solution, enhancing the donor experience.

As an Occupational Health provider, a quick and efficient solution was a pre-requisite for PAM Group to ensure they administer outstanding health assessments for their clients, and they believe the DrugWipe Dual delivers this service.
